Note

Cattle will be sold in lot number order; this catalogue has been produced to hopefully create a smooth-running sale allowing the cattle entered for show classes to be penned together, also to allow the high health cattle to be allocated separate pens, this in some respects determines the order of sale.

Please could vendors and purchasers be aware that all pedigree cattle will be sold in guineas and commercial cattle in pounds, therefore –

Lots 1 to 28 will be sold in guineas

Lots 29 to 59 will be sold in pounds

Lots 60 to 69 will be sold in guineas

Enquiries should be directed through the market office to the Auctioneers' ANIMAL HEALTH & WELFARE OFFICER.

CATTLE HEALTH

Vendors are encouraged to apply to their respective CHaCS health scheme for individual animal health cards for display on pens. For an individual animal's test results, or vaccination histories, regarding BVD, IBR, Lepto or Johne's, these are permitted above the sale pens only upon presentation of a signed veterinary declaration to verify that the animal concerned has had a clear test. Again, for reasons of practicality, no health information notes are to be put in the catalogue footnotes by vendors. Again, the sole purpose of this is to avoid confusion and to try and ensure that the information provided is done accurately, fairly and in a standardised format in the catalogue. This point has been agreed with the auctioneers. Johne's Risk Levels The Health Declaration includes a section where breeders are able to indicate their Johne's Risk Level, once known. The Risk Levels are as follows:

Risk Level 1 herds that were previously Accredited

Risk Level 2 herds that have had 1 or more clear qualifying tests

Risk Level 3 herds that have 3% or fewer reactors every year*

Risk Level 4 herds that have more than 3% reactors every year**

Risk Level 5 herds not in a CHaCS Johne's disease programme, herds with no health plan in place and herds that are not carrying out the required testing

* Note, for herds with fewer than 33 animals in the target age range, rather than 3%, Risk Level 3 will be one animal testing positive for Johne's

** Note, for herds with fewer than 33 animals in the target age range, rather than 3%, Risk Level 4 will be more than one animal testing positive for Johne's

Should you have any queries regarding the new Johne's Risk Level classification, please contact your respective CHaCS health scheme.
